Permlight Launches LightMySpace.com LED Virtual World

Tustin, CA - 10/4/2005 Permlight Products announced today that it has launched a new interactive website for communicating to potential users of LEDs the vast and varied applications where its energy efficient systems can and have been used.

LightMySpace.com is an interactive virtual world that walks users through virtually every end application for lighting and shows how LEDs can be effectively used. The initial site walks users through Permlight's extensive showrooms but will be expanded shortly with real world installations of LED systems.

"LED systems continue to emerge as a rather disruptive technology in the conventional lighting world," commented Mark Stanley, Chief Information Officer of Permlight. "We thought it best to use some of the latest communication tools to share with our community of users how they can further their use of LED systems in everything from homes, to offices, to a hotel hallway and even an outdoor street scene."

About Permlight

Permlight, a premier provider of energy efficient LED lighting solutions, designs and manufactures LED Lighting Systems and power supplies for indoor and outdoor applications. With its patented thermal management technology, the company provides products that are rated as the brightest and most cost effective systems in the industry. Permlight's patented dispensing and peel and stick installation systems also make it the easiest system to install.
